## *Terminator II*

Limited Lifetime Warranty

Now with  
UniMax  
Technology

The most advanced  
technology you can  
decide to buy

The first sump-less skimmer  
on the market

*Marine Enterprises*

Stocked by all good aquarium shops

# The Terminator II

The Terminator II by D & D Marine Enterprises Inc. is the next generation of protein skimmers. This unit has maintained our high standard of fabrication using only the highest grade materials. Now with UniMax technology, (Uni-Body Design for *Maximum* Assured Quality), D & D Marine Enterprises is using advanced electronic technology to eliminate glue seams, and potential leaks found on other products. Our fabrication technique creates a cohesive bond at the molecular level, welding the plastics together. As a result we can provide a limited lifetime warranty, the best leak protection warranty in the trade. The Terminator II has also continued with our signature design concentrator top. The angular concentrator top was introduced into the market over fifteen years ago by D & D Marine Enterprises. The tremendous efficiency of the angular concentrator gives unparalleled control over foam consistency. The concentrator top is removed by simply spinning off the retaining ring which contains an "o" ring seal, this ensures bind free easy operation with no need for thread seals.

For several years now the market has demanded venturi injection as opposed to airstone injection. The one disadvantage to venturis has been the reduction of contact time. This is due to the need to push water through the venturi at a high rate. Now with the introduction of the Terminator II and a closed loop venturi, we have total control over both the venturi pressure and process water contact time. Unlike Aspirator pump skimmers you will enjoy extreme stability and less noise.

The method of introducing process water from the fish tank can be handled in a variety of methods. Water can be siphoned directly from the top of the tank, (using the sump-less kit, an accessory) or it may be brought up from a sump using a small powerhead (remember this little pump does not need to drive the venturi. The Terminator II also incorporates a self leveling adjustment design which can be hard piped if desired. The outlet connection can be turned to face any direction, it can also be raised or lowered to meet the needs of almost any installation. No matter what happens, your adjustments will remain stable. The Terminator unlike many skimmers can be fully disassembled for total cleaning including removing the inner core.

Look at the quality of our Products. Heavy walled acrylic, and the best fabrications in the industry. We are very proud of how our products are viewed in high end markets around the world.

The Terminator will please even the most experienced aquarist. D & D Marine has been around for almost twenty years as other companies have come and gone. The reason for our success is the quality of our products and that we stand behind what we do. Buy the best skimmer in the market today backed by one of the most experienced companies in the market. You will not find a more technologically advanced skimmer on the market today. The Terminator II offers both quality and value.

## Technical Information:

**Injection; High pressure venturi**

**Process Water Injection; Variable flow rate - tangential**

**Pumps required; Skimmer drive pump included, depending upon installation method an additional small powerhead may be needed to supply process water. Installation may be done using a gravity feed from the display tank using the sump-less kit accessory. More commonly the installation will use a powerhead in the 300 gph range to pump process water from a sump.**

**Process Capacity; Tanks up to 300 U.S. gallons**

**Dimensions; Foot print 10.5 inches, height 24.5 inches**

**Manufactured by; D & D Marine Enterprises Inc. 176 Tracy Lane, Bagdad, KY 40003 U.S.A  
voice 502-747-8562 fax 502-747-0048**
