# The Typhoon

The Typhoon by D & D Marine Enterprises Inc. is designed to meet the need for a high quality hang on skimmer. This unit has maintained our high standard of fabrication using only the highest grade materials. Now with UniMax technology, *UniBody Design for Maximum Assured Quality*, D & D Marine Enterprises is using advanced electronic technology to eliminate glue seams, and potential leaks found on other products. Our fabrication technique creates a cohesive bond at the molecular level, welding the plastics together. As a result we can provide a limited lifetime warranty, the best leak protection warranty in the trade. The Typhoon uses our the same high performance true venturi as our high end skimmers for tremendous foaming and stability. Venturi skimmers are by nature far more stable than aspirators. Aspirator pumps tend to fluctuate if anything causes a change in air volume, this causes fluctuations in the water level in the skimmer. The Typhoon has also continued with our signature design concentrator top. The angular concentrator top was introduced into the market over fifteen years ago by D & D Marine Enterprises. The tremendous efficiency of the angular concentrator gives unparalleled control over foam consistency. New to the Typhoon is our lock ring top. The top is removable by the simple twist of the lock ring, no sealing tape required. Also new is the removable core, the entire inside of the unit is removable for cleaning unlike most skimmers.

The Typhoon was designed using the same high grade materials as our professional series skimmers. No short cuts were taken in the design and manufacture of the Typhoon.

The only hang on skimmer with direct discharge waste, the highest efficiency venturi design, an outflow adjustment, and needs only 3 1/4" behind the tank. This unit gives the hobbyist the option to purchase a quality product at an affordable price. The Typhoon unlike most hang on skimmers sends very few air bubbles back into the tank.

Why are our products better? Just look at our quality of design and craftsmanship. Our new products are tested for up to a year before release to the market. We use only heavy walled fabricated acrylics. Our products are respected and perform in some of the most demanding markets in the world, including the European market.

Yes, we produce for the demanding hobbyist and do so at an honest price. Ask for the best, D & D Marine Enterprises Inc.

## Technical Information:

**Injection; True Venturi**  
**Process Water Injection; Variable flow rate - Counter current**  
**Pump included**

**Process Capacity; Up to 110 U.S. gallons**  
**Dimensions; Requires only 3.25" behind the tank and is 22.5" tall**

**Foam concentration method; angular pressure concentrator**  
**Waste discharge; Direct by way of supplied hose, no cups to empty**  
**Level Adjustment; Manual outlet adjustment**

**Manufactured by; D & D Marine Enterprises Inc. 176 Tracy Lane, Bagdad, KY 40003 U.S.A.**  
**voice 502-747-8562 fax 502-747-0048**
